

Report Statement

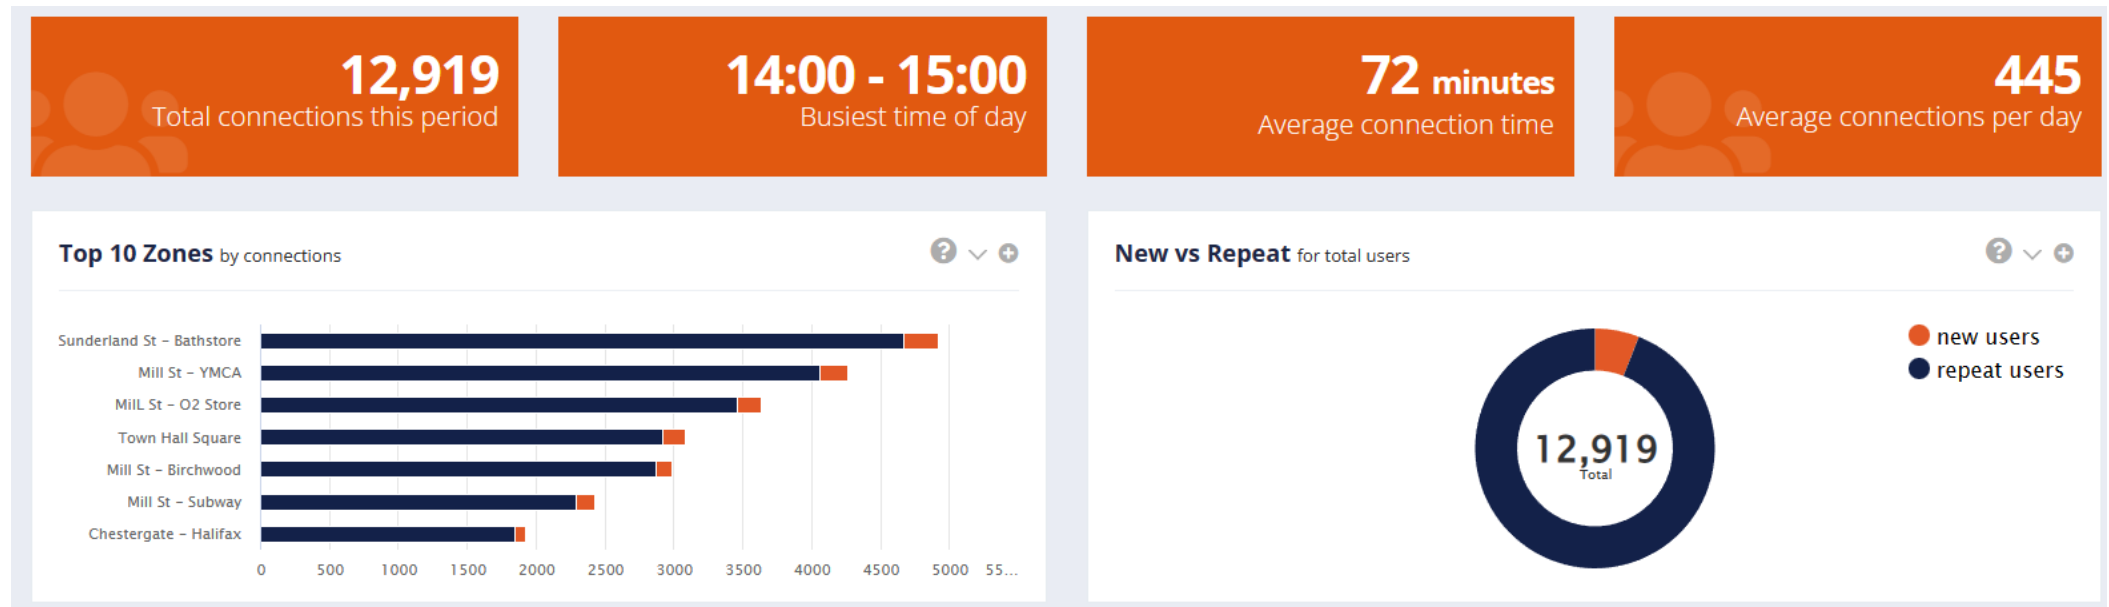

Report Purpose:
WIFI Figures

Author:
Communications Officer

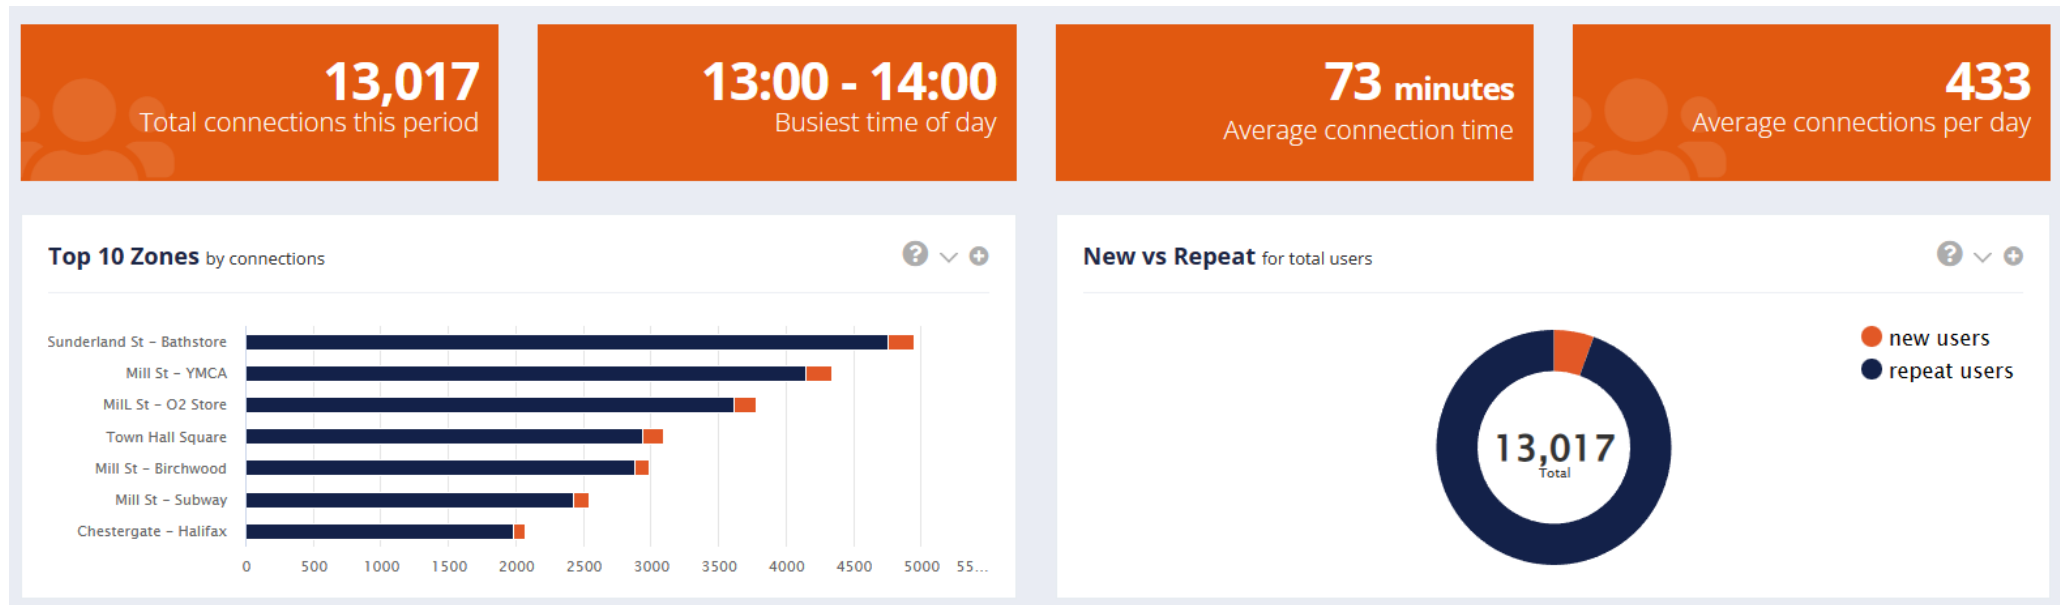

Wifi connection figures continue to see a decrease on number of connections. The number of new users remains consistent, but overall the wifi is not being used as much as it was. For example,. May 2022 saw 23,939 connections vs 13,017 connections in 2023.

Mobile phone packages now come with a lot more data than they used to, and therefore people are not as concerned about logging on to free wifi as much as they did historically.
